Our Camp Philosophy

All of our camp activities are designed to cultivate creativity, optimism, persistence, systems thinking, conscientiousness, and collaboration – the "engineering habits of mind" outlined by the National Academy of Engineering.

Activities are often framed as engineering challenges, with the educator giving the campers a set of constraints to work within. Many of our engineering challenges are open-ended, with many ways to solve a problem.

We’ve found that this leads children to solve problems even more creatively. We encourage children to design and build, test, make changes to their design, and re-test so they can experience the engineering design process at work. Campers have many opportunities to practice using all kinds of tools and a variety of materials, and we encourage them to keep engineering with items they have at home.

Gateway Scholarships

The Works Museum is dedicated to providing accessible programs to children and families, regardless of their financial situation. Through our Gateway program, a number of 50% and 25% camp scholarships are available. Learn more and download the application at theworks.org/scholarship-application.

Gateway is made possible through the support of our generous community. You can help create opportunities for those who might otherwise miss out on valuable engineering experiences by making a donation at registration checkout or by visiting theworks.org/donate.
